TECHNICAL DETAILS FOR POLYPHONY CONCERTS IN CHURCHES NOT REQUIRING SOUND AMPLIFICATION

1- **SOUND:**

The group does not need sound equipment for its songs.

But it is necessary to have 1 microphone and 1 good quality sound system for the presentations, which are an integral part of the performance and can only be heard when amplified.

This sound system can be the one already installed in the church.

If this is the case, the organiser must check that it is working properly.

PLEASE NOTE! With an audience of more than 400 to 500, and depending on the acoustics of the church, it may be necessary to have a simple sound system of very good quality (please discuss this with our stage manager).

2- **LIGHT:**

The group does not travel with a light technician.

Discreet lighting is necessary for the concerts. It is important to be able to isolate the zone around the singers; if possible prepare several different lighting effects.

PLEASE NOTE! Do not use automatic projectors with noisy ventilators.

+ Adapting to the features of the church, prepare some projectors to light up the decor (columns stained-glass windows, arches etc.).
